

Docker Support - Issue #1017

docker repo creation does not support specifying CA certificates for feed URLs

05/29/2015 10:52 PM - cduryee

Description

In Pulp 2.7 w/ docker plugins version 1.1.0, docker repo create does not support the "include_ssl" flags related to feed URL parameters. These include "--feed-ca-cert", "--verify-feed-ssl", "--feed-cert", and "--feed-key".

I would like at least feed-ca-cert and verify-feed-ssl to be available so I can sync from repos that use a specified CA cert, but if it's easier to enable them all, that works too:)

History

#1 - 06/02/2015 03:47 PM - cduryee

- Status changed from ASSIGNED to CLOSED - WORKSFORME

I suspect either I was doing something incorrectly when I put this ticket in, or there was an unrelated issue occurring.

This works for me now, closing ticket.
