

Pulp - Issue #1072

weird behaviour of content source refresh

06/19/2015 04:37 PM - igulina@redhat.com

Status:	CLOSED - WONTFIX	Start date:	
Priority:	High	Due date:	
Assignee:		Estimated time:	0:00 hour
Category:			
Sprint/Milestone:			
Severity:	2. Medium	Groomed:	No
Version:	2.7.0 Beta	Sprint Candidate:	No
Platform Release:		Tags:	Pulp 2
OS:	RHEL 7	Sprint:	
Triaged:	Yes	Quarter:	

Description

404 was not received when attempting to reach the URL with the bad path appended to it

In vi /etc/pulp/content/sources/conf.d/my_source.conf

```
[content-world]
enabled: 1
priority: 0
expires: 3d
name: Content World
type: yum
base_url: https://repos.fedorapeople.org/repos/pulp/pulp/demo_repos/zoo/
paths: f18/x86_64/os/ \
      f18/i386/os/ \
      f19/x86_64/os \
      f19/i386/os
max_concurrent: 10
max_speed: 1000
ssl_ca_cert: /etc/pki/tls/certs/content-world.ca
ssl_client_key: /etc/pki/tls/private/content-world.key
ssl_client_cert: /etc/pki/tls/certs/content-world.crt
```

Now refresh content, it will return 202 and list nothing

```
>> pulp-admin content sources refresh
```

```
+-----+
|                                     |
|                               Refresh Content Sources                               |
|                                     |
+-----+
```

This command may be exited via ctrl+c without affecting the request.

Refreshing content sources

```
[-]
... completed
```

Task Succeeded

```
>> pulp-admin content sources list
```

```
+-----+
|                                     |
|                               Content Sources                               |
|                                     |
+-----+
```

```
>>
```

Now comment lines with paths and ssl certificates:

```
[content-world]
enabled: 1
priority: 0
expires: 3d
name: Content World
type: yum
base_url: https://repos.fedorapeople.org/repos/pulp/pulp/demo_repos/zoo/
#paths: f18/x86_64/os/ \
#       f18/i386/os/ \
#       f19/x86_64/os/ \
#       f19/i386/os
max_concurrent: 10
max_speed: 1000
#ssl_ca_cert: /etc/pki/tls/certs/content-world.ca
#ssl_client_key: /etc/pki/tls/private/content-world.key
#ssl_client_cert: /etc/pki/tls/certs/content-world.crt
```

Run refresh and list

```
>> pulp-admin content sources refresh
```

```
+-----+
|                                     |
|                               Refresh Content Sources                               |
|                                     |
+-----+
```

This command may be exited via ctrl+c without affecting the request.

Refreshing content sources

```
[|]
... completed
```

Task Succeeded

```
>> pulp-admin content sources list
```

```
+-----+
|                                     |
|                               Content Sources                               |
|                                     |
+-----+
```

```
Base URL:      https://repos.fedorapeople.org/repos/pulp/pulp/demo_repos/zoo/
Enabled:       1
Expires:       3d
Max Concurrent: 10
Max Speed:     1000
Name:          Content World
Priority:       0
Source Id:     content-world
SSL Validation: true
Type:          yum
```

Now uncomment line with paths, but keep ssl commented:

```
>> pulp-admin content sources refresh
```

```
+-----+
|                                     |
|                               Refresh Content Sources                               |
|                                     |
+-----+
```

This command may be exited via ctrl+c without affecting the request.

Refreshing content sources

```
[/]
Content World
... failed
Content source content-world could not be found at
https://repos.fedorapeople.org/repos/pulp/pulp/demo_repos/zoo/f18/x86_64/os/
```

Task Failed

Task 145be71f-32ac-45f8-ad12-6f6078109a6a encountered one or more failures during execution.

```
>> pulp-admin content sources list
```

```
+-----+
|                                     |
|                               Content Sources                               |
|                                     |
+-----+
Base URL:      https://repos.fedorapeople.org/repos/pulp/pulp/demo_repos/zoo/
Enabled:       1
Expires:       3d
Max Concurrent: 10
Max Speed:     1000
Name:          Content World
Paths:         f18/x86_64/os/ \ f18/i386/os/ \ f19/x86_64/os \ f19/i386/os
Priority:       0
Source Id:     content-world
SSL Validation: true
Type:          yum
```

And now uncomment ssl lines:

```
pulp-admin content sources refresh
```

```
+-----+
|                                     |
|                               Refresh Content Sources                               |
|                                     |
+-----+
```

This command may be exited via ctrl+c without affecting the request.

```
Refreshing content sources
```

```
[-]
... completed
```

Task Succeeded

```
[root@ip-10-96-12-3 ~]# pulp-admin content sources list
```

```
+-----+
|                                     |
|                               Content Sources                               |
|                                     |
+-----+
```
