Description

Bellow you can see the same command executed a few times, where the first runs it throws an error. Nothing was changed between runs.

Only one of the pulp servers has this problem.

Packages installed:

```

When you say only one of the pulp servers has this problem, can you elaborate? Do you have multiple servers in a cluster? If so, verify that the filesystem is shared correctly for /var/lib/pulp/

Also, do you have any additional information about the connection errors? Does this failure only occur when there is also a connection error logged?

We have multiple pulp servers completely independent.

I don't know why the connection errors appear. I didn't notice them until now.

Also, I can't reproduce the error anymore. Probably because I deleted the repo, removed the orphans and recreated the repo again.

I will pay more attention to logs in case it happens again.
