<b>Description</b>			
It was recently reported that yum groupinstall pulp-consumer-qpid upgraded puppet version (2.6.7 -> 2.7.x) on the clients. As a result of which puppet master(2.6.x) s communication with puppet clients. we are not using pulp for puppet deployment but only for rpm as of now. is there a way we remove pulp-puppet plugins on client so that rpm deployment still works?

pulp version 2.5.1

As part of the pulp install, the puppet package is upgraded to 2.7.26. The puppet master is only at 2.6.7-1.

Because of this, we get the following error when puppet attempts to pull the latest catalog from the puppet master.

*Could not retrieve catalog from remote server: Error 400 on SERVER: No support for http method POST*

We are not using pulp for puppet deployment but only for rpm as of now. Is there a way we remove pulp-puppet plugins on client so that rpm deployment still works?

Can we safely remove pulp-puppet-consumer-extensions and pulp-puppet-handlers from pulp-consumer to avoid puppet upgrade without breaking rpm plugins?

- Status changed from NEW to CLOSED - NOTABUG

The pulp puppet handler requires the newer version of puppet.
