Triaged:	Yes	Quarter:	

Description

Items four and five under the Dependencies section of the Developer Setup guide do not work with dnf.

/etc/dnf/dnf.conf specifies "clean_requirements_on_remove=true", causing the command "sudo yum remove pulp-* python-pulp*" to not only remove those packages, but also their installed dependencies.

The solution proposed in irc is to switch the documentation to specify installing the required packages based on the .spec file, as used in the vagrant-setup.sh script.
