

Pulp - Task #141

Determine Redmine releases, milestone, and upstream/downstream process

02/03/2015 08:39 PM - bmbouter

Status:	CLOSED - CURRENTRELEASE	Start date:	
Priority:	High	Due date:	
Assignee:	bmbouter	% Done:	100%
Category:		Estimated time:	0:00 hour
Sprint/Milestone:		Tags:	Pulp 2
Platform Release:		Sprint:	March 2015
Groomed:	Yes	Quarter:	
Sprint Candidate:	Yes		

Description

There are a few things we want to get out of using Redmine that are currently not in place. This story is somewhat of a catch all for those deliverables:

1. Knowing progress towards a given release. It should be easy to tell what stories and fixes are included in a given release, and how complete that overall effort is.
2. Same as (1) but for sprints. Same problem there.
3. The data in the version/releases field is currently global. It should not be because otherwise a given project (ie: docker plugin) won't easily have its own versioning scheme.
4. Determine a process to track the inclusion/QE/status, etc of a bug or story for a specific version. Ie: if a bugfix lands in multiple -dev branches and a -testing branch how can we track that?
5. Implement automation to automatically mark a corresponding bugzilla bug as POST when the upstream bug goes to MODIFIED.

Associated revisions

Revision 1fb0232f - 03/19/2015 09:34 PM - regularuser

141 - Validate and keep up-to-date redmine and bugzilla data

Adds a Jenkins job definition which periodically runs a python script. The Python script validates that upstream and downstream bugs have bi-directional relationships. The script also replicates upstream issue status to the downstream external tracker info. A report of issues identified and changes made are sent to a list of admins.
