<b>Description</b>			
Assumptions:			
<ul style="list-style-type: none"><li>• All projects built using this framework use the x.y-dev,x.y-testing,x.y-release</li><li>• RPM signing is still completed manually</li><li>• The spec files in the x.y-testing repository will have their versions bumped when the content is merged from x.y-dev or when the first new commit is added after a release build. This is not auto-bumped as part of the release build as we would have no way to know if no changes have been added to a project.</li></ul>
