Reproducer:

1. create rpm repo
2. sync from already existing repo that has at least one advisory with at least one reference with existing, non-empty title attribute
3. publish repo
4. published advisory in updateinfo will have title=null

[jluza](#), I looked for a repo that meets the criteria of step (2) in comment 7, but I could not find one. Can you identify the repo and errata inside of that repo more specifically which meets the criteria? I really want to review this, but I'm blocked finding the thing I should test it with.

#11 - 04/18/2016 06:55 PM - bmbouter

I reproduced the issue by syncing RHEL7.0 server and looking at the metadata entry for errata RHBA-2015:2255 it shows the snippet:

```
<reference href="https://rhn.redhat.com/errata/RHBA-2015-2255.html" id="" title="" type="self" />
```

After applying the fix from the linked PR that same line publishes with:

```
<reference href="https://rhn.redhat.com/errata/RHBA-2015-2255.html" id="" title="RHBA-2015:2255" type="self" />
```
