**Description**

++ This bug was initially created as a clone of [Bugzilla Bug #967980](#) ++

Description of problem:

The API on the server[0] allows the caller to specify that they want importers and distributors to be included with the API call by passing "importers" and "distributors" as keys to boolean values.

The pulp.bindings.repository.RepositorySearchAPI.search() method only allows the specification of the search criteria, and so it is not possible to use that interface to retrieve the importers and distributors with the repositories in a single call.
