Description

My mistake i deleted the file sn.dat and now my pulp-admin commands are not working.

Is there a way to recover for this? I tried the following without success:

1. Restart Services
2. Reboot VM

An internal error occurred on the Pulp server:

```
RequestException: POST request
on /pulp/api/v2/actions/login/ failed with 500 - [Errno 13] Permission denied:
'/var/lib/pulp/sn.dat'
```

Hi,

That file is used for the client certificate serial numbers issued by Pulp. You *should* be able to recover by touching the file and making sure the proper permissions are set. I believe you want it to be at least mode 600, owned by apache, and with the SELinux context of `system_u:object_r:httpd_var_lib_t:s0`.

If you run into trouble, feel free to drop by in #pulp on Freenode!
