

Packaging - Issue #2120

Docs don't build on el7 for RPM or Docker

08/02/2016 12:37 AM - semyers

Status:	CLOSED - CURRENTRELEASE	Start date:	
Priority:	Urgent	Due date:

Category:			
Sprint/Milestone:			
Severity:	2. Medium	Groomed:	No
Version - Packaging:		Sprint Candidate:	No
Platform Release:		Tags:	Documentation, Easy Fix, Pulp 2
Target Release - Packaging:		Sprint:	
OS:	RHEL 7	Quarter:	
Triaged:	Yes		

Description

An older version of pygments in EPEL 7 apparently means that we don't get to use the 'json' lexer for code blocks:

RPM:

```
Warning, treated as error:
/builddir/build/BUILD/pulp-rpm-2.10.1/docs/tech-reference/iso-rsync-distributor.rst:14: WARNING: Pygments lexer name u'json' is not known
make: *** [html] Error 1
```

Docker:

```
Warning, treated as error:
/builddir/build/BUILD/pulp-docker-2.1.1/docs/tech-reference/distributor.rst:182: WARNING: Pygments lexer name u'json' is not known
RPM build errors:
make: *** [html] Error 1
```

This prevents package builds on master, which is what 2.10 will be based on tomorrow, so it needs to be fixed immediately. Since it blocks the 2.10 release, I'm going to go ahead and triage it as an Urgent but Easy Docs Fix.

History

#1 - 08/02/2016 12:47 AM - semyers

Some specifics:

EPEL 7 has pygments 1.4 in it. The JSON lexer is available in 1.5[0]. (womp womp)

My immediate solution is to use the 'text' lexer, which causes pygments to do no syntax highlighting whatsoever. (womp womp again)

[0]: <http://pygments.org/docs/lexers/#pygments.lexers.data.JsonLexer>

#2 - 08/02/2016 12:55 AM - semyers

- Status changed from ASSIGNED to POST

I went with the even simpler solution of not using code-block. Other JSON snippets were called out with the double-colon block, so I just used that for consistency.
