Triaged:	Yes			

Description

I cloned nectar master branch repository, install and replace it with nectar 1.5.2-1 and test download files from clients.
The problem that keeps proxy is solved but now another problem occurred. Packages won't stream while downloading is in progress. For example when I want to download some packages, every packages completely download in server first and after that it serve packages to client so I can't see the progress bar of downloading packages and also if I want to download a large file, it will response a timeout error on proxyset

I'm almost certain this is a duplicate of https://pulp.plan.io/issues/2696 (which is now fixed).

There's one slight confusion though. Is behi_1370 using 1.5.2-1 or master from 2016/09/09
1.5.2 doesn't include the regression fixed in 2696, but master in september 2016 would have.

The issue description otherwise matches perfectly.

#4 - 05/16/2017 09:37 PM - bmbouter

- Status changed from NEW to CLOSED - DUPLICATE

Since this does seem like a duplicate, I'm going to close it as such. Once the fix for Issue 2696 is into a build, if the reporter (or anyone) can reproduce this issue, please post a comment and we can reopen.
