

## RPM Support - Issue #2429

### repomd.xml in a published yum repository is empty when retrieved via HTTP

11/18/2016 12:30 PM - alanoe

<b>Status:</b>	CLOSED - WORKSFORME	<b>Start date:</b>	
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>		<b>Estimated time:</b>	0:00 hour

#### Description

Error:  
XML Parsing Error: no element found  
Location:  
<http://pkvm-repomgr.aus.stglabs.ibm.com/pulp/repos/in-3.1.0.0-service-installer-20160805130000-binary/repodata/repomd.xml>  
Line Number 1, Column 1:  
^

I get an empty file if I try to download the file. File content in server is OK (not empty). This blocks me to use the published yum repositories with yum; when I try, I get the following error:  
[Errno -1] Error importing repomd.xml for all: Damaged repomd.xml file

This occurs independently if XSendFile Apache module is enabled or not, so it seems to me it is not related to issue [#2427](#).

#### History

##### #1 - 11/18/2016 02:24 PM - bmbouter

What does the file look like on disk? Could you paste the output of `cat /var/lib/pulp/published/ ... /<reponame>/repomd.xml` ? Also does the file differ between http, https, and master? http and https I expect to publish to be symlinks to the actual publish in master.
