

Pulp - Story #288

[RFE] The path at which Pulp is hosted should be configurable

02/19/2015 02:21 AM - rbarlow

Status:	CLOSED - WONTFIX	Start date:	
Priority:	Normal	Due date:

Sprint/Milestone:		Tags:	Pulp 2
Platform Release:		Sprint:	
Groomed:	No	Quarter:	
Sprint Candidate:	No		

Description

++ This bug was initially created as a clone of [Bugzilla Bug #1180753](#) ++

Description of problem:

Description of problem:
It is not possible to host Pulp at a different path than the default apache conf ships with, as many pieces of Pulp assume that Pulp will be hosted at a particular path and port. We should have a setting that lets Pulp know where it is hosted so that it can generate accurate hrefs when it is hosted in different locations.

Version-Release number of selected component (if applicable):
2.4.3-1

How reproducible:
Every time.

Steps to Reproduce:
1. Try to host Pulp on a different port, or at a different path, or both.

Actual results:
You will not be able to use Pulp when Apache is configured differently.

Expected results:
You should be able to run Pulp on any port or path you like. All components should continue to work.

Django has a place where you can set the 'deployed' URL, so that should read the Pulp setting. Then whenever code goes to build a 'full' URL, it should have Django form the full URL.

Can you be more specific about what doesn't work when deployed to a non-standard port?

--- Additional comment from rbarlow@redhat.com at 01/14/2015 18:41:55 ---

I think the port element of this might not be true, so let's focus on the path part.
