Description

Pulp modules are included using:

```
<VirtualHost *:80>
    Include /etc/pulp/vhosts80/*.conf
</VirtualHost>
```

This leads to failure in case no module is loaded - eg. not present rpm/puppet.conf. This can be easily avoided by using different configuration notation - for example **IncludeOptional**:

```
<VirtualHost *:80>
    IncludeOptional /etc/pulp/vhosts80/*.conf
</VirtualHost>
```

Apache 2.4 now starts without a conf file in /etc/pulp/vhost80/

In Apache 2.4 when an 'Include' command fails to match any file Apache will fail to start. This is avoided by using the 'IncludeOptional' command. In 2.2 the 'Include' command acts in a similar fashion to the 'IncludeOptional' command in 2.4, so that configuration remains unchanged.

Closes #293
