

Pulp - Refactor #2963

Use the new lower case celery config settings

Hi, I found this issue browsing looking for easy fixes.

Is this just changing the names [here](#) to the lowercase celery 4 names?

If so, can I help?

#5 - 08/24/2017 09:42 PM - bizhang

[jwelborn](#) help would be great!

The names are the celery setting configuration names found here:

https://github.com/pulp/pulp/blob/b7d07fff4685e6914453f0bdc8361b5c99d3fd5d/platform/pulpcore/tasking/celery_instance.py#L20

#6 - 08/24/2017 09:48 PM - jwelborn

Since this is a pulp 3 fix, should I pull against 3.0-dev?

#7 - 08/24/2017 09:51 PM - bizhang

[jwelborn](#) yep

#8 - 08/24/2017 10:01 PM - jwelborn

Just to make sure I'm not oversimplifying this:

All that's needed is changing the UPPER_CASE_NAMES in celery_instance.py to the lowercase_names in the celery 4.x conf docs?

#9 - 08/24/2017 10:28 PM - bizhang

[jwelborn](#) yep! Since celery will complain if there's a mix of old and new config settings names, you can be sure that everything works if it doesn't complain after you restart the pulp services by running prestart and pstatus on a vagrant environment.
