

## Pulp - Story #3223

### As a user, I can create a publication by specifying a repository

12/19/2017 05:41 PM - dkliban@redhat.com

#### Description

The publications REST API needs to be updated to accept an optional 'repository' parameter. When specified, the latest repository version for that repository is used to create the publication.

- Groomed changed from No to Yes

- Sprint Candidate changed from No to Yes

##### #3 - 01/04/2018 11:39 PM - jortel@redhat.com

The publisher *href* included in the body of the post specifies the repository. Passing a *repository* parameter seems redundant and an odd way to specify the repository version. What is the expected behavior when the parameter is not passed? Can someone add some clarity.

- Groomed changed from Yes to No

- Sprint Candidate changed from Yes to No

##### #5 - 01/09/2018 10:25 PM - daviddavis

@jortel, good question. I can see two possible reasons to implement this user story:

1. I just want to sync a repo and publish without having to look up the latest repo version. Without this story, I have to sync, look up the latest repo version, then publish. That requires an extra step.
2. Users might be concerned that by the time a publish happens, the version they are asking to be published is no longer the latest version. Depending on how we implement this user story, it could guarantee that it always publishes the latest repo version for a repo.

I don't find either case compelling though. I'm leaning toward removing this from the MVP and maybe only implementing this if users ask for it.

##### #6 - 01/18/2018 02:11 PM - amacdona@redhat.com

- Status changed from NEW to CLOSED - WONTFIX

This issue will become part of each plugin story to implement this endpoint.
