

Pulp - Issue #3349

pulp-admin -vvv returns incorrect information for "worker_name" when querying task results

02/08/2018 07:11 PM - dalley

Description

rplevka discovered an issue with the way pulp-admin client is requesting task_status information. When querying task details with "pulp-admin -vvv tasks list", the JSON response contains "worker_name": null, which is not correct as verified by introspecting the database.

=====

pulp-admin tasks list output was lacking the worker_name field and the response JSON contained "worker_name: null". This PR is supposed to

- define worker_name attribute for pulp.bindings.responses:Task class
- modify the client_admin to include the worker_name field in the requested keys
- modify the client_admin to parse the worker_name and display it in the final output

=====

The PR is here: <https://github.com/pulp/pulp/pull/3314>
