

Python Support - Story #3624

As a user, I can as for only a reduced set of fields for large models like PythonPackageContent

Target Release - Python:		Quarter:	
Groomed:	Yes		
Sprint Candidate:	No		

Description

When retrieving a list of PythonPackageContent from /content/python/packages/, the user should not be subjected to the full details of every content unit.

Which fields should we show? I propose

- filename
- name
- packagetype
- version

In addition to the fields

- _href
- created
- notes
- artifacts

Which get pulled in by the base Content serializer which we inherit from.

This looks like the following

```
{
  "_href": "http://localhost:8000/pulp/api/v3/content/python/packages/0d2f11f5-a8f6-44c9-9053-d1f3047adf3c/",
  "artifacts": {
    "shelf-reader-0.1.tar.gz": "http://localhost:8000/pulp/api/v3/artifacts/e6d61484-0d16-4296-9f80-5f6559dcbc2f/"
  },
  "created": "2018-04-27T21:27:06.925524Z",
  "filename": "shelf-reader-0.1.tar.gz",
  "name": "shelf-reader",
  "notes": {},
  "packagetype": "sdist",
  "type": "python",
  "version": "0.1"
}
```

- Tags Pulp 3 added

With the current implementation, in order to see the reduced set of fields, simply append the "?pretty=True" query parameter. If a minimal set of fields is not supported nothing will happen - if it is supported, it will be used.
