Description	
<p>After the user has migrated content from Pulp 2 to Pulp 3, it will be necessary to migrate the repositories and the association between repos and content. There are 2 options for migrating the association:</p> <ul style="list-style-type: none">- create a repository version by performing a sync from Pulp 2 repository- create a repository version by querying Pulp 2, find units in Pulp 3, create a repository version by specifying the pulp 3 units. <p>This task is to analyze the performance of the two methods of creating repository versions and provide guidance on how this part of the migration should be handled.</p>
