Description

In [#3360](#), we introduced a new param to the POST `/pulp/api/v3/repositories/1/versions/` call that lets you set the base repository version. This lets users copy the contents of one repository into another.

Test same repository

1. Create a new repo
2. Sync the repo (this creates repo version 1)
3. Upload (or associate) a new content unit a new repository version (this create repo version 2)
4. Create a new repo version from version 1 (this creates version 3)
5. Check that version 1 and version 3 have the same content

Test different repository

1. Create a new repo A and sync it
2. Create a new repo B and a new version for this repo specify repo A version 1 as the base_version
3. Check that repo A version 1 and repo B version 2 have the same content

Associated revisions

Revision b90c8aaa - 09/27/2018 11:48 PM - kersom

Add tests for base_version and repository versions

Add tests to verify that base_version can be used to create another repository version. Using the same repository, and a different one.

Besides that, add a test to assure that an HTTP exception is raised when using a non-existent base_version.

closes: #4035 <https://pulp.plan.io/issues/4035>
