

Pulp - Test #4115

Functionally test downloader concurrency restriction

11/01/2018 04:24 PM - bmbouter

Status: CLOSED - WONTFIX Priority: Normal Assignee: Category: Sprint/Milestone: Version: Platform Release: Tags:	Sprint: Quarter:
Description Pulp's plugin API downloaders all have a concurrency restriction feature in them such that if you configure the Remote.downloader_concurrency attribute to 5, you should have only 5 downloads interacting with that remote at any given time. To verify this I think we should use an aiohttp server that listens for 6 connections and then the test schedules like 20 downloads, and the server asserts that only 5 were in flight at a time. This would use https://aiohttp.readthedocs.io/en/stable/web.html
