

RPM Support - Issue #4166

Adjust module dependencies check to consider virtual modules

11/16/2018 02:50 PM - ttereshc

Status:	CLOSED - WONTFIX	Start date:	
Priority:	Normal	Due date:	
Assignee:		Estimated time:	0:00 hour
Category:			
Sprint/Milestone:			
Severity:	2. Medium	Groomed:	No
Version:		Sprint Candidate:	No
Platform Release:		Tags:	Pulp 2
OS:		Sprint:	
Triaged:	Yes	Quarter:	
Description			
At the moment virtual modules are ignored when module dependencies are checked during applicability calculation. This can lead to false negative results for applicability.			
This can be fixed when DNF (through subman) will be able to report those from a host.			
An example of a virtual module is "platform", check dependencies sections in modules.yaml in any modular repo, e.g. F28
