Description

Test to assure that the same content - **publication** can be served by different **distributions** - URL`s.

1. Create a file repo, and sync it.
2. Create a publication.
3. Create a first distribution - Serve content on URL1.
4. Create a second distribution - Server content on URL2.
5. Assert that the same content is served in different URLs.

Revision 41d73b3b - 11/27/2018 06:59 PM - kersom

Add test to content promotion

Do the following:

1. Create a repository that has at least one repository version.
2. Create a publisher, and publication.
3. Create 2 distributions - using the same publication. Those distributions will have different base_path.
4. Assert that distributions have the same publication.
5. Select a content unit. Download that content unit from Pulp using the two different distributions. Assert that content unit has the same checksum when fetched from different distributions.
