Description

This machinery should run when a release tag is pushed indicating a new release, similar to how plugins publish to PyPI already. When activated it should:

1. Install the plugin on top of the generic, most recent core container.
2. start that container and run pulp-smash tests against it
3. If all the tests pass, publish the container to quay.io with credentials

The credentials need to be configured somehow in the config files.

History

#1 - 11/27/2018 10:57 PM - bmbouter

- Parent task set to #4188

#2 - 04/26/2019 10:33 PM - bmbouter

- Tags deleted (Pulp 3)

#3 - 02/16/2021 05:06 PM - bmbouter

- Status changed from NEW to CLOSED - CURRENTRELEASE

The single container provides this.
