Triaged:	No		

Description

Ansible Service Broker (a.k.a Automation Broker) depends on being able to run a search query against RHCC. That search sometimes returns no results.

It sounds as though we're bumping up against a timeout that is hard coded:

"Upstream Crane has a hard-coded 1 second timeout for search. So, if Solr takes longer than 1 second to respond, Crane will return a 503 back to the client."
