Description Username is mutable and can be updated/changed via REST API. Is it on purpose? Do we rely anywhere on username? Suggestion: make it immutable for now

Since we don't really have a full design for how users should work, I think we should remove the create & update mixins from the viewset, leaving a single "admin" user that is immutable.

This isn't at all what we want eventually, but it puts us in a great position to do whatever we need to in a backwards compatible way.

@amacdona, I like the idea of disallowing user creation/update at this point.
