Sprint/Milestone:	3.0.0			
Platform Release:			**Tags:**	
Groomed:	No		**Sprint:**	Sprint 47
Sprint Candidate:	No		**Quarter:**	

Description

We will need to create a new scenario to test source installs so we can also test the pulp3-devel role.

molecule tests run with its own playbook `molecule/default/playbook.yml`

Add pulp3-devel to this list, and fix any errors that come up.

Create source install molecule test scenario

Strange idempotence issue with postgresql role when screen or redhat-lsb-core is installed in pulp3-devel. I've removed these packages, but it is not clear why they would cause idempotence problems with the creation of the postgres socket at /var/run/posgresql.
