<b>Platform Release:</b>		<b>Sprint:</b>	Sprint 50
<b>Groomed:</b>	No	<b>Quarter:</b>	
<b>Sprint Candidate:</b>	No		

**Description**

The rest of Pulp services describe their function while pulp-wsgi describes the interface used to serve the application. I think it would be more useful to rename this service to describe the functionality. Some ideas:

- pulp-core
- pulp-api
- pulp-api-server

Related I sent an email to pulp-dev discussing this a bit more broadly:

Howdy,

Within Pulp 3, I've found myself struggling to refer to the pieces of the runtime deployment and wanted to raise a few questions I keep coming back to.

- 1) Per [1], pulpcore seems to reference the entirety of the server, workers and resource manager that live within the repository at [2]. Is that correct?
- 2) What is the 'server' called? I keep wanting to call it the 'pulp-api-server' or 'pulp-api-app' or 'pulp-api'.

- Eric
