Description

The user should be able to:

1. Upload an Artifact either using the Artifact API or Uploads API.
2. Create MavenArtifact using the MavenArtifact API. The user should be able to provide 'group_id', 'artifact_id', 'version' and 'filename'.

This should work very similar to how the File plugin handles upload.

Most likely, the plugin already supports this workflow. As part of this story, a functional test should be added that makes sure that upload works.
