<b>Description</b>			
Django Admin commands are broken up into sections based on their app label. Commands from 'drf_yasg' are under a section header called 'drf_yasg'. I would expect pulp commands to be under a 'pulp' or 'pulpcore' label.

- Sprint/Milestone changed from 71 to 3.0.0

#6 - 10/10/2019 03:21 PM - bmbouter

I looked into this a bit, and the reason it's listed this way is because Django uses the "last package name" as the label, not the actual "app name". Our app name is "pulpcore.app", but the command lives at "pulpcore.app.management.command.xxx" so those get listed under "app".

What I realized is that with this pattern every plugin will have it's commands living at [app] which is not a good user experience. I can see two options:

a) add a subdir of the plugin name, so for pulpcore it would be "pulpcore.app.pulpcore.management.command.xxx" this would place it visually under pulpcore. This is kind of a hack though.

b) make "pulpcore" the app, not "pulpcore.app". I think this would be simpler overall in terms of code layout. We could also adopt this in the plugin\_template. I know this is kind of a big change, but it's also a straightforward one.

#7 - 10/10/2019 09:02 PM - bmbouter

- Sprint/Milestone deleted (3.0.0)

Removing since this label isn't part of the command or API, we could fix this later.
