<b>Description</b>	
<p>1. Have a role be served up by a Distribution. This is probably easiest done by uploading one, adding it to a repo version, and configuring the Distribution to serve that repo version.</p> <p>2. Test that you can have ansible-galaxy client install that role directly via a pre-known URL for that unit in that distribution's url. See the example in the docs here: <a href="https://github.com/pulp/pulp_ansible#using-a-direct-path">https://github.com/pulp/pulp_ansible#using-a-direct-path</a></p>
