<b>Description</b>	
<p>This is the negative test related to <a href="https://pulp.plan.io/issues/4778">https://pulp.plan.io/issues/4778</a></p> <p>Add the collection to Pulp but do <b>not</b> have the collection served by a Distribution. Try to have mazer install it and verify that it won't install even though the content unit is inside of Pulp (but not that Distribution).</p> <p>This validates that content is only handed out through the correct Distributions.</p> <p>I'm not sure if this is a very valuable test though since core is really providing this feature.</p>
