Description Assume you have a AnsibleDistribution whose repository_version is a RepositoryVersion with content in it. This would be created like this: https://github.com/pulp/pulp_ansible#create-a-distribution-for-a-repositoryversion <ol style="list-style-type: none">1. Request a content unit from the repo and assert the contents are correct.2. Create a new RepositoryVersion that removes the unit and do not modify the AnsibleDistribution3. refetch the same content unit and verify it 404s
