<b>Description</b> Assume you have a AnsibleDistribution whose repository_version is a RespotoryVersion with content in it. This would be created like this: <a href="https://github.com/pulp/pulp_angular#create-a-distribution-for-a-repositoryversion">https://github.com/pulp/pulp_angular#create-a-distribution-for-a-repositoryversion</a>  <ol style="list-style-type: none"><li>1. Request a content unit from the repo and assert the contents are correct.</li><li>2. Create a new RepositoryVersion that removes the unit and do <b>not</b> modify the AnsibleDistribution</li><li>3. refetch the same content unit and verify it 404s</li></ol>
