Description

In Pulp 2, we allow users to configure timeouts for syncs and such. They can set a read timeout and connection timeout. We need this behavior in Pulp 3 as well.

See <https://pulp.plan.io/issues/1758#note-17>:

Currently we offer options like concurrency, but these would be good options also.

Also the current options can be seen here: https://docs.pulpproject.org/en/3.0/nightly/restapi.html#operation/remotes_file_file_create
