

## Pulp - Test #4965

Task # 4961 (CLOSED - COMPLETE): [Epic] Improve Integration and Testing with Nginx and Apache

### pulp-smash should test pulp-api and pulp-content-app directly, and not through nginx or apache

<b>Description</b>	
To simplify the testing of Pulp, pulp-smash's defaults should expect to use gunicorn hosting pulp-api and pulp-content-app directly. Currently it tests through nginx.	
The installer will have those services listening on 127.0.0.1 only, so if you want pulp to expose pulp-api and pulp-content-app to external traffic, use the vars given by this story: <a href="https://pulp.plan.io/issues/4964">https://pulp.plan.io/issues/4964</a> and have them expose at 0.0.0.0:24816 and 0.0.0.0:24817.
