Description	
<p>The File Remote accepts a 'proxy_url' parameter[0]. When set, the File Remote uses the proxy for all requests during a sync operation.</p>	
<p>This test will require writing a very simple server using aiohttp[1] that will proxy all requests and log them in such a way that pulp-smash can read the log. The test needs to do the following:</p>	
<ol style="list-style-type: none">1. Start the proxy service on port 123452. Create a repository3. Create a remote with a proxy_url set to 'localhost:12345'4. Create a repository version by syncing from the Remote.5. Assert that the proxy service received all the requests from Pulp.6. Assert the sync was successful.
