Description			
Here:			
https://pulp-file.readthedocs.io/en/latest/workflows/publish-host.html#create-a-distribution-for-the-publication			
variables are all called "PUBLICATION_..." and when distribution is created URI with ".../publications/..." is used - I assume it is some copy&paste error?			
Also it is perfectly possible I got the concept wrong. Sorry for that in that case.
