

Pulp - Task #5404

Story # 5598 (NEW): [Epic] Long-Term To-Do for pulp-operator

Container CI testing shouldn't install packages onto the pulp-api container

09/04/2019 05:06 PM - mdepaulo@redhat.com

Sprint Candidate:	No		
Description			
Currently in order to do CI testing, plugin-template installs RPM and python packages into the pulp-api container.			
This has 3 problems:			
<ol style="list-style-type: none">1. It is brittle. If pulp-api is restarted, they are lost.2. It means the container image is being modified; which could possibly invalidate tests.3. It is probably not the correct design pattern.			
This task is to reach the correct design pattern, and implement it.			
A possible alternative pattern is running tests from a separate sidecar container in the same pod.
