

Pulp - Issue #558

Traceback is shown in admin.log if pulp-admin experiences an authentication failure

02/28/2015 11:37 PM - igulina@redhat.com

Status:	CLOSED - CURRENTRELEASE	Start date:	
Priority:	Normal	Due date:	
Assignee:	amacdona@redhat.com	Estimated time:	0:00 hour
Category:			
Sprint/Milestone:			
Severity:	2. Medium	Groomed:	No
Version:	2.5	Sprint Candidate:	No
Platform Release:	2.6.0	Tags:	Pulp 2
OS:		Sprint:	
Triaged:	Yes	Quarter:	

Description

Description of problem:

If pulp-admin is used without proper authentication, a traceback is logged on the .pulp/admin.log. Logging a failed authentication is perfectly reasonable, but logging a traceback is not. Remove the traceback and instead log a simple message about the failed authentication attempt, including the username attempted.

Version-Release number of selected component (if applicable):

```
rpm -qa | grep pulp-server
```

pulp-server-2.5.0-0.6.beta.fc20.noarch

How reproducible:

always

Steps to Reproduce:

```
pulp-admin login -u admin -p wrongpass
```

The specified user does not have permission to execute the given command

```
less .pulp/admin.log
```

2014-10-02 13:59:40,035 - ERROR - Client-side exception occurred
