

Ansible Plugin - Story #5851

As a Galaxy V3 user, I can search for what collections provide specific files

Description

Similar to the yum "whatprovides" but reports on which collections contain a given path.

GET /pulp_ansible/galaxy/<path:path>/api/v3/collections/q=netapp

This will fulltext search the file paths stored in the DIGEST data for collections. That DIGEST data is stored/served as part of <https://pulp.plan.io/issues/5850>.
