Pulp - Task #5873

update pulpcore and pulp_file functional tests to use a configurable hostname+prefix for fixtures

12/11/2019 10:36 PM - dkliban@redhat.com

Status:	CLOSED - CURRENTRELEASE	**Start date:**

Sprint/Milestone:	3.0.1		
Platform Release:		**Tags:**	CI/CD
Groomed:	No	**Sprint:**	
Sprint Candidate:	No	**Quarter:**	

Description

Pulp-smash config needs to accept a 'fixtures_origin' setting. This should default to 'https://repos.fedorapeople.org/repos/pulp/pulp/fixtures/'.

All the functional tests in pulpcore and pulp_file need to be updated to use 'fixtures_origin' config when constructing URLs for File Remotes to sync from.

The Travis scripts for pulpcore and pulp_file need to set the 'fixtures_origin' setting to 'http://localhost/' before running the functional tests.

I would probably make this configurable and not hard coded. For example, I've been thinking of spinning up a fixtures container/vm that's not local (ie external to my dev env) to serve fixtures so I don't have to keep generating the fixtures.

ETA: This could be set in the pulp-smash config as an option: https://github.com/pulp/pulpcore/blob/master/.travis/pulp-smash-config.json
