Description

Hi,
I'm try to build a CentOS 8 client from my PULP repositories but get the following erro
"No available modular metadata for modular package"

I have performed a full sync of both centos-x86_64-server-8 & centos-x86_64-server-appstream repositories and can see "ModuleMD" information when listing the repo

RPM Repositories

Id: centos-x86_64-server-appstream
Display Name: None
Description: None
Content Unit Counts:
Distribution: 1
Modulemd: 112
Modulemd Defaults: 40
Package Category: 5
Package Environment: 4
Package Group: 58
Package Langpacks: 1
Rpm: 8089

Can anyone tell me why the installation cant find the metadata ?

Thanks
Lee

- Assignee set to ppicka

#2 - 01/23/2020 03:25 PM - ppicka

Can you specify the pulp version please? It looks like Pulp2, doesn't it?

It's definitely Pulp 2.

leepayne, where are you seeing this error? Is it an error you get when syncing, when publishing, or when performing some other operation? Could you give a bit more detail on what triggers this?

- *Status changed from NEW to CLOSED - WORKSFORME*

Not enough info to reproduce. In case you still encounter the problem, please, file an issue and provide version of Pulp and answers to the questions above.

Potentially the same issue as <https://pulp.plan.io/issues/6101>
