Description

The request below is possible because nginx and apache are configured to serve the 'pulp_webserver_static_dir' at the root[0, 1]. However, the value of this variable is set to {{ pulp_install_dir }}/site-packages/rest_framework[2, 3].

The pulp_webserver_static_dir should always be /var/lib/pulp/assets/. nginx and apache should be configured to serve it at /static/.
