

Docker Support - Story #6311

As a user I can mirror from a registry with a secret pull

03/09/2020 03:47 PM - ipanova@redhat.com

Status: CLOSED - WONTFIX	Start date:
Priority: Normal	Due date:

Sprint/Milestone:	Tags: Pulp 2
Platform Release:	Sprint:
Target Release - Docker:	Quarter:
Groomed: No	
Sprint Candidate: No	

Description

Some registries require a secret pull provided during the pull of the content.

Secret pull is a base64 encoded username+password. Add an option called --secret-pull which will accept the secret pull info in the json format. Pulp will parse it and extract the auth part which will be used in the Basic auth headers and sent to the registry.
