Description <ol style="list-style-type: none">1. Ensure there is only one Pulp worker.2. Create a repository. Let its feed reference a large repository. (For example, EPEL.)3. Start a sync. Immediately restart the ``pulp_workers`` service. (It's important that ``pulp_workers`` be restarted, not started and stopped. For details, see #2835) This should cause the first sync to abort.4. Update the repository. Let its feed reference a small repository. (For example, ``https://repos.fedorapeople.org/pulp/pulp/fixtures/rpm-unsigned/``.)5. Start a sync. Verify that it completes. If `Pulp #2835`_ still affects Pulp, then the worker will be broken, and the sync will never start. Reference: #2835
