Description

I believe to reproduce you would:

1. create a pulp2 repository with errata and migrate it
2. create a new pulp2 repository with errata (i synced the same content in this case), and ONLY migrate that one

You'll get this error:

```
pulp: rq.worker:ERROR: UnboundLocalError: local variable 'item' referenced before assignment

'Add content item to the list to migrate: {item}'.format(item=item)
UnboundLocalError: local variable 'item' referenced before assignment
```

I don't think this would be a common use case in katello, usually if we stop including a repo in a migration its been deleted from pulp, but looked like a simple fix (indent two lines)
