Description

Currently the import_collection task sends the artifact fileobject to galaxy-importer. In galaxy-importer we want move from using the tarfile module to tar in shell.

We would like import_collection task to send the artifact filepath to galaxy-importer.

Also, currently in the fileobject we use the .storage.url property to download the artifact to a container to run "ansible-test sanity". So perhaps we can send the filepath + url instead of the opened fileobject.

History

#1 - 06/04/2020 10:00 PM - bmbouter

When we are using pulpcore with S3 and we access the file in pulp_ansible [here](#) I wonder what filename it's actually giving you. It's not actually stored within the /var/lib/pulp/artifact backend so I wasn't sure what to expect.

- Status changed from NEW to ASSIGNED
- Assignee set to fao89

#3 - 06/08/2020 07:12 PM - bmbouter

- Status changed from ASSIGNED to CLOSED - WONTFIX
- Assignee deleted (fao89)

On slack we determined we would have this change made in the galaxy-collection itself instead of pulp_ansible. As such I'm closing WONTFIX.
