#### Description

1. Sync the appstream repo
2. Get the errata reference associated to errata\_id = RHBA-2019:1530 or any other modular errata
3. run (make sure to update the errata id)

```
curl https://`hostname`/pulp/api/v3/content/rpm/advisories/9ff192a4-906f-4efd-ba29-55222eed0d8/
--cert
/etc/pki/katello/certs/pulp-client.crt --key /etc/pki/katello/private/pulp-client.key | jq
```

1. Look for pkglist attribute

Expected: pkglist has both module references and package references.

Actual: Notice that module entries are missing from the package list

#### Additional Info:

```
RHBA-2019:1530 is an errata that has the following module in its package list
<update status="final" from="release-engineering@redhat.com" version="1" type="bugfix">
  <id>RHBA-2019:1530</id>
  .....
  <pkglist>
  <collection short="rhel-8-for-x86_64-appstream-rpms__8_1_virt">
    <name>rhel-8-for-x86_64-appstream-rpms__8_1_virt</name>
    <module stream="rhel" version="8000020190529063309" arch="x86_64" name="virt" context="55190bc5" />
    .....
  </update>
```

Yet pulp does not show me any module name in the custom json

it does look like this information exists[0] but is not being exposed in the API[1]. I'd suggest filing a bug.
